

UpStage™ Sound

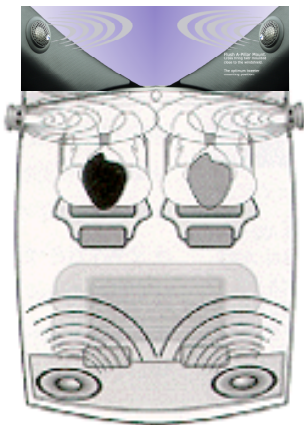

For staging, it's as if there needs to be a stage in front of the listener, just as there was at the original performance. A good stage in the car adds width AND depth. A great stage adds width and depth WAY BEYOND the confines of the dash, side windows and front window. Think of good staging as placing the singer out on the hood ornament instead of just up on the dash. To achieve good imaging and staging, you need to add to your main speaker set

The StageFront™ UpStage™ System.

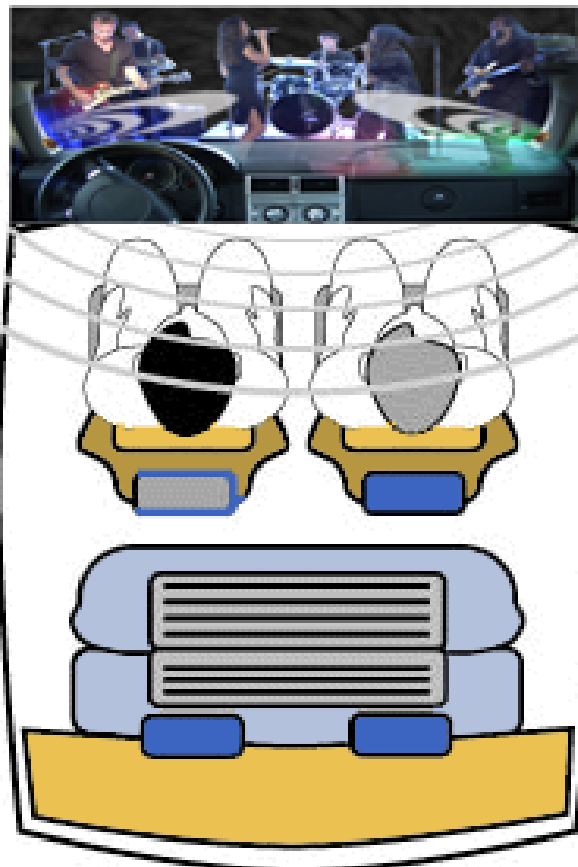

StageFront™ Technology UpStage™ System 500-Series was developed by StageFront™ audio engineers to create a superior live event listening experience in vehicles of all types.

StageFront™
Technology

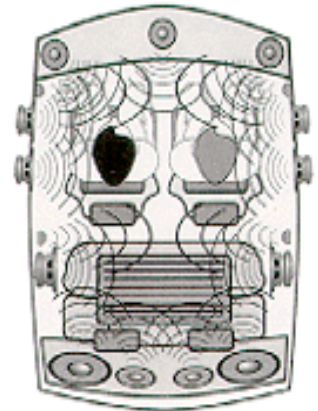

CDT Audio

Superior center stage imaging
Sound stage forward of listener
Approaching "point source"
Minimum number of drivers
