

StageFront™ Technology

Simple, Easy, Amazing!

For the first time ever, car stereo audiophiles can enjoy a true "UpStage" seamless sound stage directly ahead up above the dash board. A stereo image and a soundstage in their cars just as deep, wide and up above the dash, stable as they are used to at a live concert and from serious high end home audio speakers. This incredibly up-high and stable image, comes from an amazing new design and engineering concept called StageFront™ technology.

The StageFront™ "UpStage" systems is an add on kit. Install this kit to raise and place the sonic image in the forward "driving direction". Eliminate distracting image collapse where certain sounds have the tendency to "fall in" toward your conventionally mounted mid/ tweeters. Achieve this by utilizing an extensive selection of mounting systems to install our special super tweeters and by installing our universally compatible blending modules. Remove the distracting sound effects from your conventional systems drivers and move your sound onto a seamless sound stage directly ahead up above the dash!

Upstage Sound. The Future of Music on The Road!

System M519
Cross Firing Image Tweeters

Flush A-Pillar Mount.
Cross firing twtr mounted
close to the windshield.
The optimum tweeter
mounting position.
